

## 100-watt + 100-watt dual BTL class-D audio amplifier

### Features

- 100-W + 100-W output power at THD = 10% with  $R_L = 6 \Omega$  and  $V_{CC} = 36 V$
- 80-W + 80-W output power at THD = 10% with  $R_L = 8 \Omega$  and  $V_{CC} = 34 V$
- Wide-range single-supply operation (14 - 39 V)
- High efficiency ( $\eta = 90\%$ )
- Four selectable, fixed gain settings of nominally 25.6 dB, 31.6 dB, 35.1 dB and 37.6 dB
- Differential inputs minimize common-mode noise
- Standby and mute features
- Short-circuit protection
- Thermal overload protection
- Externally synchronizable

### Description

The TDA7498 is a dual BTL class-D audio amplifier with single power supply designed for home systems and active speaker applications.

It comes in a 36-pin PowerSSO package with exposed pad up (EPU) to facilitate mounting a separate heatsink.

**Table 1. Device summary**

## 2 Electrical specifications

### 2.1 Absolute maximum ratings

**Table 3. Absolute maximum ratings**

Symbol	Parameter	Value	Unit
$V_{CC}$	DC supply voltage for pins PVCCA, PVCCB, SVCC	44	V
$V_I$	Voltage limits for input pins STBY, MUTE, INNA, INPA, INNB, INPB, GAIN0, GAIN1	-0.3 to 3.6	V
$T_j$	Operating junction temperature	-40 to 150	°C
$T_{stg}$	Storage temperature	-40 to 150	°C

### 2.2 Thermal data

**Table 4. Thermal data**

Symbol	Parameter	Min	Typ	Max	Unit
$R_{th\ j-case}$	Thermal resistance, junction to case	-	2	3	°C/W

### 2.3 Recommended operating conditions

**Table 5. Recommended operating conditions**

Symbol	Parameter	Min	Typ	Max	Unit
$V_{CC}$	Supply voltage for pins PVCCA, PVCCB, SVCC	14	-	39	V
$T_{amb}$	Ambient operating temperature	-40	-	85	°C

### 2.4 Electrical specifications

Unless otherwise stated, the values in the table below are specified for the conditions:  
 $V_{CC} = 36\text{ V}$ ,  $R_L = 6\ \Omega$ ,  $R_{OSC} = R_3 = 39\text{ k}\Omega$ ,  $C_8 = 100\text{ nF}$ ,  $f = 1\text{ kHz}$ ,  $G_V = 25.6\text{ dB}$   
 $T_{amb} = 25\text{ °C}$ .

**Table 6. Electrical specifications**

Symbol	Parameter	Condition	Min	Typ	Max	Unit
$I_q$	Total quiescent current	No LC filter, no load	-	40	60	mA
$I_{qSTBY}$	Quiescent current in standby	-	-	1	10	$\mu\text{A}$
$V_{OS}$	Output offset voltage	Play mode	-100	-	100	mV
		Mute mode	-60	-	60	
$I_{OCP}$	Overcurrent protection threshold	$R_L = 0\ \Omega$	6	7	-	A

Table 6. Electrical specifications (continued)

Symbol	Parameter	Condition	Min	Typ	Max	Unit
$T_j$	Junction temperature at thermal shutdown	-	-	150	-	°C
$R_i$	Input resistance	Differential input	48	60	-	k $\Omega$
$V_{OVP}$	Overvoltage protection threshold	-	42	43	-	V
$V_{UVP}$	Undervoltage protection threshold	-	-	-	8	V
$R_{dsON}$	Power transistor on resistance	High side	-	0.2	-	$\Omega$
		Low side	-	0.2	-	
$P_o$	Output power	THD = 10%	-	100	-	W
		THD = 1%	-	78	-	
$P_o$	Output power	$R_L = 8 \Omega$ , THD = 10%	-	80	-	W
$P_D$	Dissipated power	$P_o = 100 \text{ W} + 100 \text{ W}$ , THD = 10%	-	20	-	W
$\eta$	Efficiency	$P_o = 100 \text{ W} + 100 \text{ W}$	-	90	-	%
THD	Total harmonic distortion	$P_o = 1 \text{ W}$	-	0.1	-	%
$G_V$	Closed-loop gain	GAIN0 = L, GAIN1 = L	24.6	25.6	26.6	dB
		GAIN0 = L, GAIN1 = H	30.6	31.6	32.6	
		GAIN0 = H, GAIN1 = L	34.1	35.1	36.1	
		GAIN0 = H, GAIN1 = H	36.6	37.6	38.6	
$\Delta G_V$	Gain matching	-	-1	-	1	dB
$C_T$	Crosstalk	$f = 1 \text{ kHz}$ , $P_o = 1 \text{ W}$	50	70	-	dB
eN	Total input noise	A Curve, $G_V = 20 \text{ dB}$	-	15	-	$\mu\text{V}$
		$f = 22 \text{ Hz to } 22 \text{ kHz}$	-	25	50	
SVRR	Supply voltage rejection ratio	$f_r = 100 \text{ Hz}$ , $V_r = 0.5 \text{ Vpp}$ , $C_{SVR} = 10 \mu\text{F}$	-	70	-	dB
$T_r, T_f$	Rise and fall times	-	-	50	-	ns
$f_{SW}$	Switching frequency	Internal oscillator	290	310	330	kHz
$f_{SWR}$	Output switching frequency range	With internal oscillator <sup>(1)</sup>	250	-	400	kHz
		With external oscillator <sup>(2)</sup>	250	-	400	
$V_{inH}$	Digital input high (H)	-	2.3	-	-	V
$V_{inL}$	Digital input low (L)		-	-	0.8	

**Table 6. Electrical specifications (continued)**

Symbol	Parameter	Condition	Min	Typ	Max	Unit
V <sub>STBY</sub>	Pin STBY voltage high (H)	-	2.7	-	-	V
	Pin STBY voltage low (L)		-	-	0.5	
V <sub>MUTE</sub>	Pin MUTE voltage high (H)	-	2.5	-	-	V
	Pin MUTE voltage low (L)		-	-	0.8	
A <sub>MUTE</sub>	Mute attenuation	V <sub>MUTE</sub> = L, V <sub>STBY</sub> = H	-	70	-	dB

1.  $f_{SW} = 10^6 / ((16 * R_{OSC} + 182) * 4)$  kHz,  $f_{SYNCLK} = 2 * f_{SW}$  with R3 = 39 kΩ (see [Figure 19](#)).

2.  $f_{SW} = f_{SYNCLK} / 2$  with the external oscillator.

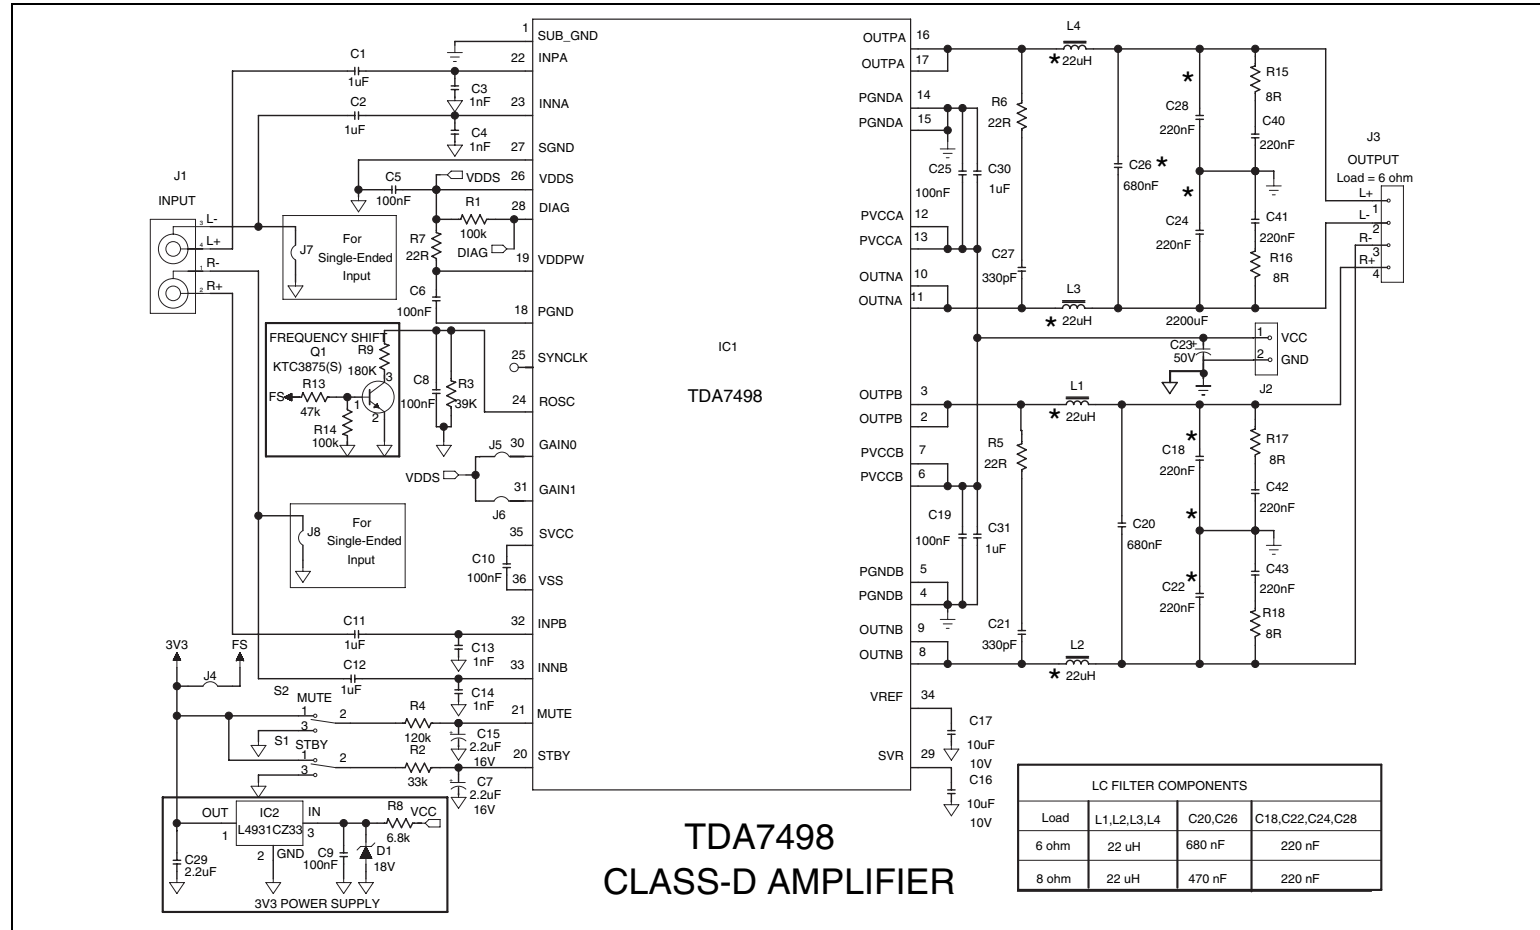

# 3 Characterizations

## 3.1 Test circuit

Figure 3 shows the test circuit with which the characterization curves, shown in the next sections, were measured. Figure 4 shows the PCB layout.

Figure 3. Test circuit for characterizations

### 3.2 Characterization curves

Unless otherwise stated the measurements were made under the following conditions:

$V_{CC} = 36\text{ V}$ ,  $f = 1\text{ kHz}$ ,  $G_V = 25.6\text{ dB}$ ,  $R_{OSC} = 39\text{ k}\Omega$ ,  $C_{OSC} = 100\text{ nF}$ ,  $T_{amb} = 25\text{ }^\circ\text{C}$

# 4 Applications information

## 4.1 Applications circuit

Figure 19. Applications circuit for 6- or 8-Ω speakers

Doc ID 16107 Rev 8

19/28

TDA7498

Applications information

## 4.2 Mode selection

The three operating modes of the TDA7498 are set by the two inputs, STBY (pin 20) and MUTE (pin 21).

- Standby mode: all circuits are turned off, very low current consumption.
- Mute mode: inputs are connected to ground and the positive and negative PWM outputs are at 50% duty cycle.
- Play mode: the amplifiers are active.

The protection functions of the TDA7498 are enabled by pulling down the voltages of the STBY and MUTE inputs shown in [Figure 20](#). The input current of the corresponding pins must be limited to 200  $\mu$ A.

**Table 7. Mode settings**

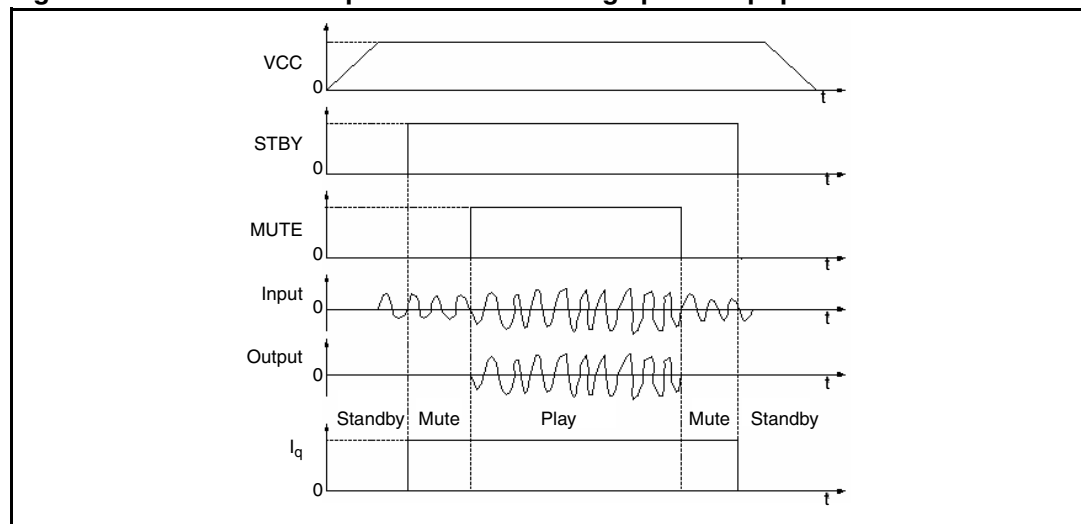

Mode	STBY	MUTE
Standby	L <sup>(1)</sup>	X (don't care)
Mute	H <sup>(1)</sup>	L
Play	H	H

1. Drive levels defined in [Table 6: Electrical specifications on page 8](#)

**Figure 20. Standby and mute circuits**

**Figure 21. Turn on/off sequence for minimizing speaker “pop”**

### 4.3 Gain setting

The gain of the TDA7498 is set by the two inputs, GAIN0 (pin 30) and GAIN1 (pin31). Internally, the gain is set by changing the feedback resistors of the amplifier.

**Table 8. Gain settings**

GAIN0	GAIN1	Nominal gain, $G_v$ (dB)
L	L	25.6
L	H	31.6
H	L	35.6
H	H	37.6

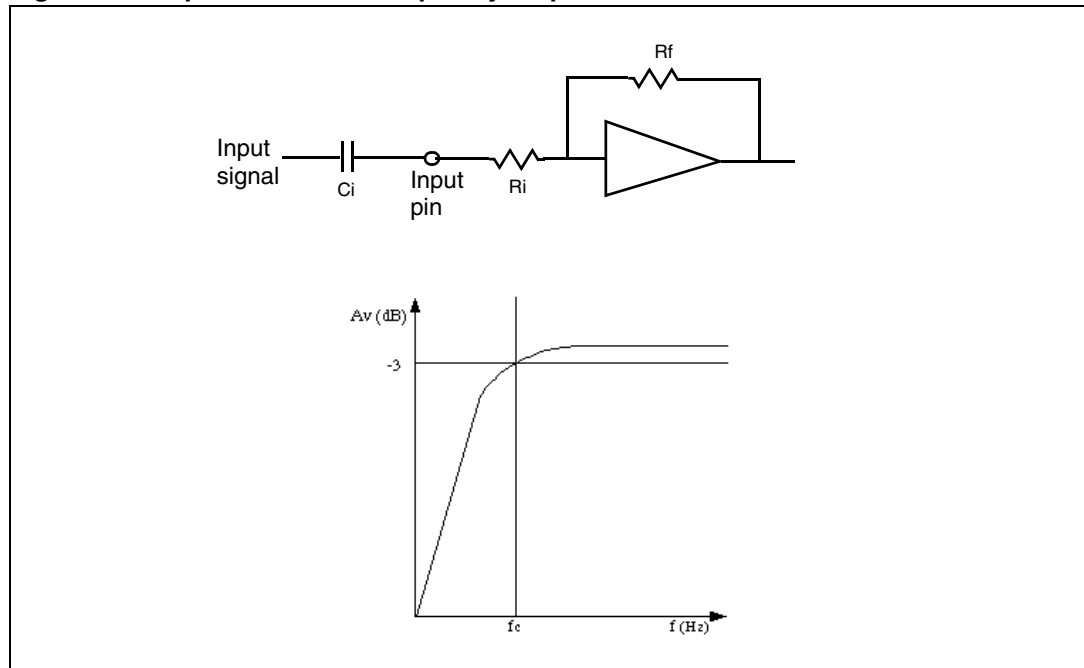

### 4.4 Input resistance and capacitance

The input impedance is set by an internal resistor  $R_i = 60\text{ k}\Omega$  (typical). An input capacitor ( $C_i$ ) is required to couple the AC input signal.

The equivalent circuit and frequency response of the input components are shown in [Figure 22](#). For  $C_i = 470\text{ nF}$  the high-pass filter cutoff frequency is below 20 Hz:

$$f_c = 1 / (2 * \pi * R_i * C_i)$$

**Figure 22. Input circuit and frequency response**

## 4.5 Internal and external clocks

The clock of the class-D amplifier can be generated internally or can be driven by an external source.

If two or more class-D amplifiers are used in the same system, it is recommended that all devices operate at the same clock frequency. This can be implemented by using one TDA7498 as master clock, while the other devices are in slave mode, that is, externally clocked. The clock interconnect is via pin SYNCLK of each device. As explained below, SYNCLK is an output in master mode and an input in slave mode.

### 4.5.1 Master mode (internal clock)

Using the internal oscillator, the output switching frequency,  $f_{SW}$ , is controlled by the resistor,  $R_{OSC}$ , connected to pin ROSC:

$$f_{SW} = 10^6 / ((R_{OSC} * 16 + 182) * 4) \text{ kHz}$$

where  $R_{OSC}$  is in  $k\Omega$ .

In master mode, pin SYNCLK is used as a clock output pin whose frequency is:

$$f_{SYNCLK} = 2 * f_{SW}$$

For master mode to operate correctly then resistor  $R_{OSC}$  must be less than 60  $k\Omega$  as given below in [Table 9](#).

### 4.5.2 Slave mode (external clock)

In order to accept an external clock input the pin ROSC must be left open, that is, floating. This forces pin SYNCLK to be internally configured as an input as given in [Table 9](#).

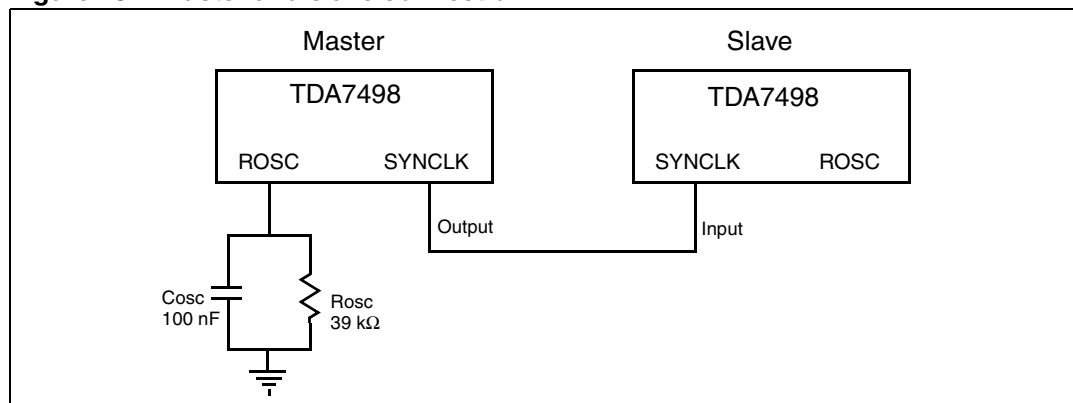

The output switching frequency of the slave devices is:

$$f_{SW} = f_{SYNCLK} / 2$$

**Table 9. How to set up SYNCLK**

Mode	ROSC	SYNCLK
Master	$R_{OSC} < 60 \text{ k}\Omega$	Output
Slave	Floating (not connected)	Input

**Figure 23. Master and slave connection**

### 4.6 Output low-pass filter

To avoid EMI problems, it may be necessary to use a low-pass filter before the speaker. The cutoff frequency should be larger than 22 kHz and much lower than the output switching frequency. It is necessary to choose the L and C component values depending on the loud-speaker impedance. Some typical values, which give a cutoff frequency of 27 kHz, are shown in *Figure 24* and *Figure 25* below.

**Figure 24. Typical LC filter for a 8-Ω speaker**

**Figure 25. Typical LC filter for a 6-Ω speaker**

## 4.7 Protection functions

The TDA7498 is fully protected against overvoltages, undervoltages, overcurrents and thermal overloads as explained here.

### Overvoltage protection (OVP)

If the supply voltage exceeds the value for  $V_{OVP}$  given in [Table 6: Electrical specifications on page 8](#) the overvoltage protection is activated which forces the outputs to the high-impedance state. When the supply voltage falls back to within the operating range the device restarts.

### Undervoltage protection (UVP)

If the supply voltage drops below the value for  $V_{UVP}$  given in [Table 6: Electrical specifications on page 8](#) the undervoltage protection is activated which forces the outputs to the high-impedance state. When the supply voltage recovers to within the operating range the device restarts.

### Overcurrent protection (OCP)

If the output current exceeds the value for  $I_{OCP}$  given in [Table 6: Electrical specifications on page 8](#) the overcurrent protection is activated which forces the outputs to the high-impedance state. Periodically, the device attempts to restart. If the overcurrent condition is still present then the OCP remains active. The restart time,  $T_{OC}$ , is determined by the R-C components connected to pin STBY.

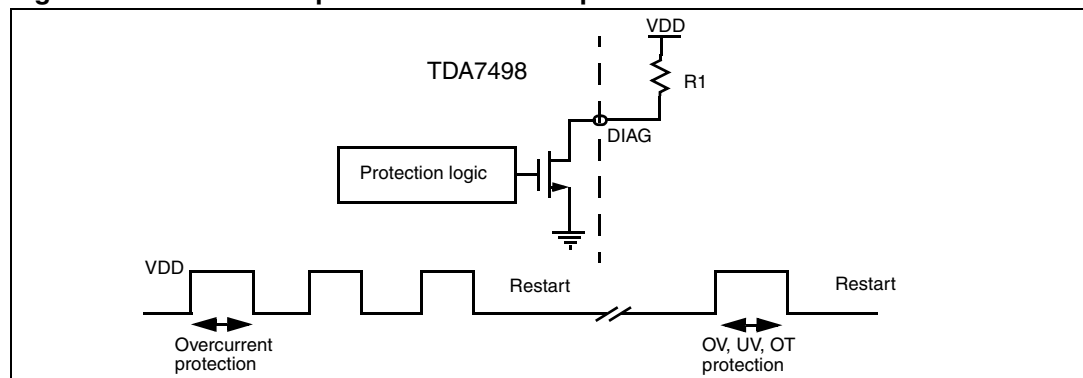

### Thermal protection (OTP)

If the junction temperature,  $T_j$ , reaches 145 °C (nominally), the device goes to mute mode and the positive and negative PWM outputs are forced to 50% duty cycle. If the junction temperature reaches the value for  $T_j$  given in [Table 6: Electrical specifications on page 8](#) the device shuts down and the output is forced to the high-impedance state. When the device cools sufficiently the device restarts.

## 4.8 Diagnostic output

The output pin DIAG is an open drain transistor. When any protection is activated it switches to the high-impedance state. The pin can be connected to a power supply (< 39 V) by a pull-up resistor whose value is limited by the maximum sinking current (200  $\mu$ A) of the pin.

**Figure 26. Behavior of pin DIAG for various protection conditions**

## 5 Package mechanical data

The TDA7498 comes in a 36-pin PowerSSO package with exposed pad up.

[Figure 27](#) shows the package outline and [Table 10](#) gives the dimensions.

**Table 10. PowerSSO36 EPU dimensions**
