12/24/36VDC Remote Motor Control

Reversing remote controller for DC motor up to 60 Watts with inputs for Limit Switches (Not included). Includes 3 button Remote Control.

Unit Controls direction by reversing the polarity on the 2 motor output terminals. Ideal for Gates, Overhead doors etc.

Power: Controller: 12-36VDC Remote: A23 12V Battery (Not Supplied)

Modes: 2 (Set by jumper on controller)

Jog: Motor energized as long as Button Pressed.

Continuous: Energized until "STOP" pressed or a Limit Switch is activated

Range: >50ft. Depending on Antenna location/extension and terrain

Output: 12-36VDC 60W/Max 5A (10surge)

Functions: UP (Forward)/OFF/ DOWN (Reverse)

Connections: Terminal Strips: Motor, Power & Limit Switches

0.1Pitch header for External Wired Direction Switches

Installation:

- 1: Open Case by removing 4 corner screws
Measure and place 2 mounting screws in mounting surface (Not Supplied).
Do not tighten completely as you will have to slide controller case down over these screws after wiring and assembly. You want a "snug" fit
- 2: Select Mode (Any time Mode Jumper is changed Controller Power must be cycled to take effect)
Jog : Motor energized as long as Button Pressed or Limit Switch is activated
Continuous: Energized until "STOP" pressed or Limit Switch is activated
- 3: Connect Motor Wire to Motor Terminal Strip
- 4: Connect Power Supply Leads to Power Terminal Strip. Polarity is not Critical
NOTE: Should your motor not turn in the proper direction upon testing; Reverse Motor Leads
- 5: Remove the jumpers from the "Brake" Terminal Strip.
Connect Limit Switches (Normally Closed contacts) to "Brake" Terminal Strip)
NOTE: Be sure to the correct switch to the proper terminals.
TOPR: "UP" limit switch
TOPL: "DOWN" limit switch
- 6: Use of Remote Wired Direction Switches. (These perform the same function as the switches on the controller)
Connect SPST-NO momentary switches to the respective 0.1 Pitch header pins.
- 7: Dress all wiring and reassemble case
Slide assembled case down over mounting screws placed in Step 1

12/24/36VDC Remote Motor Control

Programming Remote into Controller:

Programming May be Done with Case on or off

Hole in Controller Case Upper Right Corner allows access "LEARN" Button with a small screwdriver or Paper Clip

NOTE: That the LEDs are Not Visible with case assembled

1: Install A23 12V Battery (Not Supplied)

Be sure to observe polarity indicators

Press any button LED should light.

No LED: check Battery

2: On Controller:

Controller will automatically sequence through setting up Remote Button Codes

Momentarily Press "LEARN" Button on Controller

"LEARN" LED will light

3: On Remote: Follow this Carefully!!

A: Momentarily Press Top "UP" Button

"LEARN" LED on Controller will flash twice

B: Momentarily Press Bottom "DOWN" Button

"LEARN" LED on Controller will flash twice

C: Momentarily Press Middle "STOP" Button

"LEARN" LED on Controller will Flash twice

4: On Controller:

Momentarily Press "LEARN" Button on Controller

"LEARN" LED will go out

5: To Erase all Remote Codes

Press & Hold "LEARN" Button on Controller for >5sec

"LEARN" LED will Flash. Remote codes are now erased
