

# AC Digital Voltage Ampere Meter

**Model: PZEM-026**

**A.Function**

**B.Display**

**I. Display interface**

HTN wide viewing angle LCD screen: voltage + ampere + orange backlight

**II. Display instruction**

**1.Voltage**

Measurement range: 40~400V

Display format: <100V display such as: 80.0V  
 $\geq 100V$  display such as: 220V Accuracy:  $\pm 1\%$

**2.Ampere**

Measurement range: 0~100A

Display format: <10A display such as: 1.00A  
 $<100A$  display such as: 10.0A  
 $\geq 100A$  display such as: 100A

Starting measurement: 0.02A Accuracy:  $\pm 1\%$

**C.Other Function**

**1.Backlight control**

The backlight can be turned on or off by short press the key

**2.Error adjustment**

The product is calibrated 100% before delivery, the user can adjust error manually. the method is as follows

**Step 1:** long press the key (about 3 seconds) until the screen flashes, then release the key;

**Step 2:** digital flicker means entering error adjustment state, and the digit cycle flickers in sequence: voltage high digit  $\rightarrow$  voltage middle digit  $\rightarrow$  voltage low digit  $\rightarrow$  voltage decimal point  $\rightarrow$  ampere high digit  $\rightarrow$  ampere middle digit  $\rightarrow$  ampere low digit  $\rightarrow$  ampere decimal point. The flicker represents the present adjustable digit, short press the key to adjust the value (digital 0~9 cycle, decimal point shift);

**Step 3:** long press the key (about 3 seconds) after the adjustment, the screen display PASS and return to the normal display interface, means the adjustment is successful.

**E.Dimension Diagram(mm)**

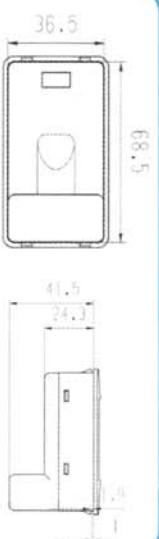

Figure 3 Boundary Dimension

**F.Attention**

1. This product is suitable for indoor use.
2. This product is suitable for AC.
3. This product is suitable for single phase power frequency AC power grid.

4. The measurement voltage and ampere shall not exceed the calibration range.
5. Make sure the wiring is correct.
